Richard Bernstein Advisors

Richard Bernstein Advisors LLC (“RBA”) is an investment manager focusing on long-only, global equity and asset allocation investment strategies. The Firm manages over $8.2 billion (as of 3/31/2020) and is unique in its “top-down” research approach versus the traditional “bottom up” style of most asset management firms.

Global Moderate ETF Strategy Investment Process

Richard Bernstein Advisors employs a macro-driven, top-down style to construct a global tactical asset allocation portfolio. The investment team uses quantitative indicators and the firm’s macro-economic analysis to recommend global equity and fixed income asset classes and several sub-asset classes and sectors using only US listed ETFs. Typical factors and indicators include: global valuations; global yield curves; asset class, regional, and country correlations; profit cycle analyses, and style and sector rotation; earnings analysis; investor sentiment and other factors.

Asset Allocation Guidelines

- Asset allocation and implementation recommendations are made by the investment committee led by Richard Bernstein. Exposure recommendations among asset classes will be based on the team’s assessment of proprietary and non-proprietary quantitative indicators, and the firm’s macro-economic analysis. After assessing numerous models and indicators, the final allocation recommendations are made by the team.
- Structural asset correlations are an integral part of RBA’s diversification strategy. These tend to be longer term in nature, and thus less affected by short-term market volatility and fluctuations. RBA also seeks to balance portfolio risk with investment themes and opportunities potentially not yet fully recognized by the market.
- Shorter-term tactical strategies, 12 - 18 months, are formulated within the framework of the firm’s core concepts of long-term asset allocation. The team makes tactical allocations based on market mispricings relative to changes in the global economy, geopolitics and corporate profits. The strategic allocation is based on a long-term neutral policy of 50% equity, 45% fixed-income and 5% cash.
- Asset allocation recommendation guidelines: Equity allocation: 40% to 60%; Fixed-income allocation: 35% to 55%; Alternatives, commodities-related, currencies, cash: 0% to 15%. Benchmark is: 50% MSCI ACWI Index, 45% Bloomberg Barclays U.S. Aggregate Bond Index, 5% Bloomberg Barclays 1-3 month US T-Bill.

Portfolio Selection

- The strategy has the ability to recommend any global asset class - essentially a “go anywhere” strategy and can invest in any sector, market cap, duration, credit, style or country/region. Individual ETF recommendations to implement the asset allocation strategy will be based on quantitative screening, risk-analysis and qualitative review.
- Annual turnover is typically expected to be less than 50%, except in cases of unusual economic or market volatility, which could increase turnover.

Model performance information included in this Profile is as of current quarter-end and subject to change. Prior period returns may have been restated to conform to this presentation. All other information is as of the most recent quarter end. See disclosure at the end of the Profile for further information.

Past performance is no guarantee of future results.
The performance was calculated by Richard Bernstein Advisors LLC ("the Adviser") for the Richard Bernstein Advisors Global Moderate ETF Strategy ("model") as described below. The Adviser provides the model or a substantially similar model to various platform sponsors which, as of March 31, 2020, have over 1,200 accounts and approximately $360.9 million invested based on the model. The performance shown above is based on the specific recommendations provided by the Adviser and not on the performance of any individual advisory account. The model’s asset allocation recommendations are subject to guideline allocation limitations at the major asset class level (i.e., equity, fixed income and cash) that may change over time. The Adviser believes that the sponsors generally implement its recommendations as provided, but sponsors have discretion to implement the model differently.

The Adviser has calculated model portfolio performance from August 1, 2010. During the period from August 1, 2010 through March 31, 2013, the Adviser provided asset allocation recommendations for each sub-asset class to a platform sponsor, which then selected exchange-traded funds ("ETFs") with the assistance of the Adviser by mapping each sub-asset class recommendation to a specific ETF. For the period after March 31, 2013, the model portfolio performance reflects the Adviser’s asset allocation recommendations for each sub-asset class and its actual ETF recommendations in real time. As the portfolio is a model, it does not reflect any investor’s actual experience and investors may have achieved greater or lesser performance than the model portfolio. The model performance shown does not reflect any market condition or economic factors that may have affected the actual performance of the model portfolio if the Adviser had actually been managing the portfolio during the relevant time periods. Investors should not rely on the model performance since it does not reflect the actual management of assets. Results are shown on a “gross” and “net” basis. Gross hypothetical/model portfolio performance is before deduction of any investment management or other fees. Net hypothetical/model portfolio performance is shown net of annual advisory fees of 0.40%, the highest fee charged by the Adviser. Neither the gross nor net model portfolio performance reflects the deduction of brokerage or custodial fees. Returns reflect implementation of asset allocation changes and the market price of ETFs as of the market close, and the reinvestment of dividends and interest on cash balances. Taxes have not been deducted. Actual performance of client portfolios may differ materially due to a variety of reasons, including but not limited to, the timing of cash deposits and withdrawals, reinvestment of dividends, length of time positions are held, discretionary trading in the account, and client restrictions. The investment advisory fee schedule of the Adviser is described in its Part 2 of the Form ADV.

The benchmark has been constructed using the indices identified above. The indices were chosen because they represent the broad-based markets in the international equity, U.S. Fixed Income and Money Market asset classes. The index weightings percentages are based on a long-term “neutral” allocation to each index determined by the Adviser. Benchmark index results shown are not reduced by fees as an index is unmanaged. Further, securities contained in an index will vary from those in the model portfolio and actual managed accounts. Indices are shown for convenience purposes only and are not available for direct investment.

Indices and portfolio data herein have been supplied by outside sources, including, Richard Bernstein Advisors LLC, and are believed to be reliable as of the date indicated. The source for ETF returns is Bloomberg. Additional, fixed income (bond) ETFs are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Foreign investments may be subject to greater risk than domestic investments. Index and portfolio data herein have been supplied by outside sources, including, Richard Bernstein Advisors LLC, and are believed to be reliable as of the date indicated. The source for ETF returns is Bloomberg.
